File 4	<div><p>Fig 1.tiff</p></div>

FIELD	RESPONSE
File 5	<p>Fig 2.tiff</p>  <p>The figure consists of two vertically stacked box plots. The top plot is titled 'Monthly dengue cases, Bangladesh (2009-2010)' and the bottom plot is titled 'Monthly dengue cases, Bangladesh (2011-2012)'. Both plots show the distribution of dengue cases by month, with the x-axis labeled with months from Jan to Dec. The y-axis is labeled 'Monthly dengue cases' and ranges from 0 to 100. The plots show a clear seasonal pattern with higher case counts in the summer months (May to September).</p>
File 6	<p>Fig 3.tiff</p>  <p>The figure consists of two vertically stacked line graphs. The top graph is titled 'Monthly growth factor' and shows the mean monthly growth factor for dengue cases in Bangladesh from 2009 to 2012. The x-axis is labeled 'Months' and ranges from Jan to Dec. The y-axis is labeled 'Monthly growth factor' and ranges from 0 to 1.5. The graph shows a peak in the growth factor during the summer months (May to September). The bottom graph is titled 'Monthly growth factor' and shows the monthly growth factor for dengue cases in Bangladesh for each year from 2009 to 2012. The x-axis is labeled 'Months' and ranges from Jan to Dec. The y-axis is labeled 'Monthly growth factor' and ranges from 0 to 1.5. The graph shows multiple lines representing the growth factor for each year, with a general trend of higher growth factors during the summer months.</p>
File 7	<p>Fig 4.tiff</p>  <p>The figure is a line graph titled 'ARIMA Model'. The x-axis is labeled 'Years' and ranges from 2000 to 2030. The y-axis is labeled 'Number of dengue cases' and is on a logarithmic scale ranging from 10^{2.5} to 10^{3.5}. The graph shows a line representing the number of dengue cases over time, with a shaded area indicating the confidence interval. The number of cases shows a general upward trend over the period shown.</p>

FIELD	RESPONSE
Cover Letter	<p>July 19, 2023 David B Taylor, PhD Editor-in-Chief, Journal of Medical Entomology</p> <p>Dr. Taylor,</p> <p>Please find attached our manuscript “Two Decades of Endemic Dengue in Bangladesh (2000-2022): Trends, Seasonality, and Impact of Temperature and Rainfall Patterns on Transmission Dynamics” for your consideration as a “Research article” in JME.</p> <p>The first official dengue outbreak in Bangladesh was reported in 2000, and since then, dengue has become endemic in the country, posing a significant health challenge. We have compared the monthly dengue virus (DENV) infection, deaths, case-fatality ratio, and meteorological parameters between the first and the recent decade (2000-2010 vs. 2011-2022) and to understand the trends, seasonality, and impact of change of temperature and rainfall pattern on transmission dynamics of dengue in Bangladesh.</p> <p>The mean annual number of dengue cases increased eight-fold during the second decade, with 2216 cases during 2000-2010 vs. 18,321 cases during 2011-2022. The mean annual deaths have doubled (21 vs. 46). The annual temperature increased by 0.49 °C in the recent decade, which adds approximately 4292-degree-hours equivalent heat per year in the country. For dengue virus transmission, approximately 305-degree-hours equivalent heat is needed to accomplish the extrinsic incubation period in <i>Aedes</i> mosquitoes at 26° C. Thus, the additional 0.49°C temperature will add to the burden of more than 14 generations of infectious mosquitoes in the environment of Bangladesh. In the regression model, monthly mean temperature (Incidence risk ratio [IRR]: 1.26) was significantly associated with monthly dengue incidence.</p> <p>Between two decades, rainfall has decreased by 314 mm, however, unusual precipitation during pre-and-post monsoon season increased which allowed an extended vector season in the country. Two of our previous articles published in JME discussed the effect of early rainfall and late rainfall on the unusual number of dengue cases and deaths in Bangladesh during 2019 and 2022, respectively. In the regression model, first-lagged rainfall (IRR: 1.08), and second-lagged rainfall (IRR: 1.17) were significantly associated with monthly dengue incidence.</p> <p>Despite increasing the DENV infection, and deaths, the case-fatality ratio¹ has decreased (0.69 vs 0.23). This improvement is probably associated with</p>

FIELD	RESPONSE
	<p>improved access to the health care system, a better understanding of the treatment protocol including the availability of clinical management guidelines and training for the health care providers, better availability of Information, Education, and Communication (IEC) materials, community engagement and expansion of surveillance system to more hospitals in the surveillance system across the county in the recent years, and overall improvement of the economic condition of the country. The time series ARIMA model forecast an increasing trend of DENV in Bangladesh.</p> <p>This is one of the articles, that generates empirical evidence of climate changes (temperature and rainfall pattern) on dengue virus incidence in Bangladesh. We believe the readers of vector biology, entomology, epidemiology, and climate change will be interested to understand the overall picture of dengue outbreaks in Bangladesh in the last two decades.</p> <p>We have discussed the public health challenges for controlling future outbreaks of the dengue virus in Bangladesh. All authors reviewed the article and provided their consent for journal submission. We do not have any conflict of interest. The article is not submitted elsewhere except in Medrxiv to publish the preliminary analysis as a preprint.</p> <p>Kind regards, Najmul Haider, PhD, MPH, MSc, DVM Lecturer in Epidemiology School of Life Sciences, Keele University, Staffordshire, United Kingdom, ST5 5BG, Email: n.haider@keele.ac.uk</p> <p>Less text</p>

Manuscript Information

- * Number of Figures: 4
- * Number of Colour Figures: 4
- * Number of Tables: 3
- * Number of Words (should be less than 3781 7500):

*** Do you have a high-resolution photograph of your insect(s) of study that you would like to submit for consideration for the journal cover? If so, click yes below and an ESA staff member will contact you regarding your photograph.**

Yes

☒ No

*** Do you or your co-authors have any [conflict of interest](#)? As corresponding author it is your responsibility to confirm with your co-authors whether they have any conflicts to declare. If you are unable to do this you will need to co-ordinate the completion of written forms from all co-authors, and submit these to the editorial office before the manuscript is accepted.**

If you are in any doubt what constitutes a conflict, please read the [FAQs](#) or contact the [editorial office](#).

Yes

☒ No

If yes, please state:

*** Does this paper describe a new taxon or perform another nomenclatural act such as a new name combination? (If yes, ESA staff will assist you with ZooBank registration.)**

Yes

☒ No

*** Confirm whether your paper contains supplementary data to go online only?**

Yes

☒ No

If yes, please state details:

*** Has your paper been rejected by another ESA journal? Please note it's our policy that papers rejected from one ESA journal cannot be submitted to another ESA journal.**

No

* Have you or will you be depositing data needed to support reported analyses in DRYAD (datadryad.org)? No

If yes, please supply details:

* Are you willing to pay the journal's publication fee? Yes

* All authors are required to pay for color figures in print. There is no fee for publishing in color online and grayscale in print. Are you aware of the charge for color figures and willing to pay if you use color figures in print? Yes

* ESA members receive an automatic discount on page charges, can apply for a full or partial waiver of page charges, and are eligible for discounted Open Access charges. If you or a co-author are a member of the ESA, please enter your membership number for confirmation purposes. If multiple authors are ESA members, you only need to enter one membership number. If none of the authors of your paper are ESA members, please enter "not a member." To learn about other benefits of ESA membership or to become a member today, please [click here](#). not a member

*** You must obtain written permission to use quotations, figures, tables, and other communications not in the public domain, whether published or unpublished. This includes personal communications. Have copies of these correspondences been made available to the editor? If not, please include the permission(s) when you submit your manuscript.**

Not applicable

If yes, please indicate which illustrations have previously been published. For more information of seeking permission please click [here](#).

*** Confirm the following:**

- The manuscript has been submitted solely to this journal and is not published, in press, or submitted elsewhere.
- The research meets the ethical guidelines, including adherence to the legal requirements of the study country.
- ✓ • The manuscript conforms to the [journal guidelines](#). Note that the manuscript must have continuous line numbers on the Abstract, Text, and Reference sections. An unnumbered manuscript will be returned to the author for correction before it will be reviewed.
- All authors listed on the manuscript have seen and agreed to all information contained in the manuscript and the information contained in the manuscript is available for general dissemination.

Author Confirmation

- * I confirm that I am the corresponding author for the article I am submitting and that Oxford University Press ("OUP") may retain my email address for the purpose of communicating with me about the article. I agree to update my submission account immediately if my details change. If my article is accepted for publication OUP will contact me using the email address I have used in the online submission registration process. Please note that OUP does not retain copies of rejected articles.
- ✓ Please note: If you are not the Corresponding Author for this article, you confirm that the Corresponding Author has given you permission to submit his/her details on his/her behalf and that he/she agrees that Oxford University Press ("OUP") may retain his/her email address for the purpose of communicating with him/her about the article and he/she will notify OUP immediately if his/her details change. You confirm that you will inform the Corresponding Author that if the article is accepted for publication OUP will contact him/her using the email address you have provided on his/her behalf in the registration process.
